

PROJECT BRIEF

Personal Blog Website for Tejaswi

A minimal, modern personal publishing experience with a visual feed, public reading, and authenticated reader actions.

Owner	Tejaswi
Product type	Personal blog website with light community features
Publishing model	Admin-only publishing; readers can browse and read freely
Access rule	Authentication is required only for save, like, and comment actions
Design direction	Visual feed for discovery, calm editorial reading pages, minimal profile memory

1. Product Vision

The website should feel like Tejaswi's digital home: personal, visual, easy to browse, and calm to read. The feed can borrow the quick visual discovery pattern of Instagram, but the reading experience should feel more like a modern editorial blog than a social media app.

Core principle

Reading should always be free and frictionless. Authentication should appear only when a reader wants a personal layer: saving, liking, commenting, or returning to their reading history.

2. Core Experience

Area	What it should do	Why it matters
Home feed	Show visual blog cards with image, title, category, tags, date, read time, and soft engagement signals.	Creates fast browsing and an Instagram-like discovery feel without making the site noisy.
Full blog page	Open when a card is clicked; show a focused article layout, reading progress, author note, related posts, and interaction actions.	Protects the actual reading experience and gives each post enough space to feel meaningful.

Authentication gate	Let anyone read; ask readers to sign in only when they save, like, or comment.	Feels fair and avoids blocking casual readers.
Reader profile	Show Saved Blog, Liked Blog, Commented Blog, Continue Reading, and Recently Viewed.	Turns login into a useful memory system rather than a barrier.
Admin studio	Private area where Tejaswi can draft, preview, publish, schedule, and moderate comments.	Keeps publishing personal and controlled.

3. User Roles and Permissions

Role	Can do	Cannot do
Guest reader	Browse feed, open full posts, search, filter, read related posts, share public links.	Save, like, comment, or access reader profile.
Authenticated reader	Everything a guest can do, plus save posts, like posts, comment, create collections, and view reading memory.	Publish or edit blog posts, moderate other users, access admin tools.
Admin: Tejaswi	Create, edit, draft, preview, publish, pin posts, schedule posts, moderate comments, manage tags and newsletter.	No public multi-author publishing unless intentionally added later.

4. Feature Set

Content and Discovery

- Categories and tags such as Design, Life, Tech, Travel, Thoughts, Projects, and Personal.
- Featured or pinned posts for the most important writing.
- Search by title, tag, category, topic, and mood.
- Mood filters such as Reflective, Technical, Personal, Lessons, and Behind the Scenes.
- Post series to group related posts into journeys, such as Learning AI or Building My Portfolio.

Reading Experience

- Estimated reading time and published date near the title.
- Subtle reading progress bar on long posts.
- Author note section explaining why the post was written.
- Related posts after the article, kept gentle and non-intrusive.
- Behind the post section with references, drafts, images, source links, or personal context.

Interaction and Reader Memory

- Authenticated save, like, and comment actions.
- Bookmark or save collections so readers can organize posts later.
- Tiny reactions beyond likes, such as Thoughtful, Useful, Inspiring, and Relatable.
- Reader profile with Saved Blog, Liked Blog, Commented Blog, Continue Reading, and Recently Viewed.
- Shareable quote snippets so readers can highlight a line and share it as an image or link.

Admin and Publishing

- Private drafts and admin preview before publishing.
- Comment moderation with approve, hide, pin, reply, and report handling.
- Scheduling for future posts.
- SEO metadata and social preview images for every post.
- Newsletter or email digest for readers who want quiet updates.

6. Unique Features Worth Keeping

These features can make the website feel more personal and memorable without turning it into a large social platform.

- Post series: organize connected writing into named journeys.
- Reader memory: let signed-in readers continue reading and revisit recently viewed posts.
- Tiny reactions: replace or complement likes with richer emotional signals.
- Behind the post: add drafts, sources, references, images, or personal context under selected posts.
- Guestbook: a minimal authenticated page where readers can leave a short message for Tejaswi.

10. One-Sentence Positioning

Positioning

Tejaswi's personal blog is a calm visual archive where anyone can read freely, while signed-in readers can save, react, comment, and build a personal memory of the writing they care about.
